

HEALTH FROM HEAD-TO-TOE

As an internist, you are dedicated to the complete health of your patients. At Center for Vein Restoration, we are dedicated to the long-term and overall well-being of your patients. Our care focuses on diagnosis, treating, and preventing the progression of Chronic Venous Insufficiency (CVI). CVI may initially present as leg pain or visible veins, and if left untreated can lead to skin ulcers, edema, or increased risk of DVT. CVI is a quality of life disease, and patients affected have a higher likelihood of depression and social isolation.

40M+ Americans have vein disease, but only **6-8%** receive treatment

WHAT TO LOOK FOR

VARICOSE VEINS

Bulging, rope-like veins visible on the lower leg or foot

EDEMA/LEG SWELLING/LYPHDEMA

Fluid retention in the calf, foot or ankle, visibly distending the skin

HYPERPIGMENTATION/SKIN CHANGES

Reddish/brown discoloration in the lower leg caused by hemosiderin deposition

VENOUS STASIS ULCERATION

An open, often unhealing lesion, appearing on the medial aspect of the mid-calf or ankle

#1 Cause of leg edema in Patients over **50** is CVI

Of patients with CVI will develop venous ulcers

600k People annually hospitalized due to DVT

2¢-3¢

of every dollar

Is spent in our healthcare system addressing complications of CVI.
