

GETTING PATIENTS BACK ON THEIR FEET

As experts in treating diseases of the lower extremities, you are on the front line of diagnosing signs and symptoms of chronic venous insufficiency (CVI) - such as skin changes, swelling, ulcerations, and others. The Center for Vein Restoration is here to help with your patient's CVI.

40M+ Americans have vein disease,
but only **6-8%** receive treatment

WHAT TO LOOK FOR

VARICOSE VEINS

Bulging, rope-like
veins visible on the
lower leg or foot

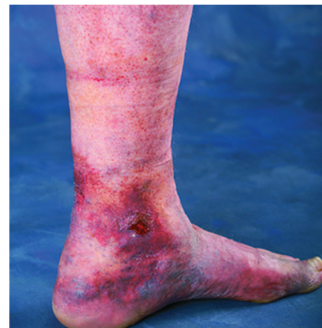

EDEMA/LEG SWELLING/ LYMPHEDEMA

Fluid retention in the
calf, foot or ankle,
visibly distending the
skin

HYPERPIGMENTATION/ SKIN CHANGES

Reddish/brown discoloration
in the lower leg caused by
hemosiderin deposition

VENOUS STASIS ULCERATION

An open, often
unhealing lesion,
appearing on the
medial aspect of the
mid-calf

Venous insufficiency
in the lower leg
accounts for **75%**
of all leg ulcers

Vein disease is
5 times more common
than peripheral
artery disease

2M+

Working days are
lost **each year** due
to venous ulcers

apma 
Advancing foot and ankle
medicine and surgery

APMA has supported
diagnosing and increasing
awareness around
CVI since 2012
